

SHANE D. SCHOEPFER

sschoepfer@wcu.edu • (828) 227-2726 • shaneschoepfer.com
Department of Geosciences and Natural Resources,
Western Carolina University
Cullowhee, NC

EDUCATION:

University of Washington

Doctor of Philosophy in Earth and Space Sciences
Dissertation Title: *Nutrients, Productivity, and Redox Conditions during Greenhouse Extinctions in the Panthalassic Ocean*
Advisor: Dr. Peter D. Ward

Seattle, WA

August 2014

Brown University

Bachelor of Arts in Geology-Biology - magna cum laude
Master of Science in Geological Sciences
Thesis Title: *Stable Isotopes of Inorganic Nitrogen Nutrients in Narragansett Bay*
Advisor: Dr. Warren L. Prell

Providence, RI

May 2009

May 2009

PROFESSIONAL EXPERIENCE:

Assistant Professor, Western Carolina University

Investigations in Environmental Geology

Methods in Geology

Paleoclimate

Environmental Geochemistry

Geology Field Trip: Kentucky

Geology Field Trip: Blue Ridge

The Nature of Science

Earth History and Biodiversity

Geology, Landscapes, and the Human Psyche

Geology Senior Research Capstone

August 2017 – Present

2017-2021

2017-2021

Fall 2017

Spring 2018, 2020

Spring 2018, 2020

Fall 2018, 2021

Spring 2019

Spring 2019

Fall 2019

Fall 2020

Field Geology Instructor, Dillon Montana

University of Washington

University of Calgary

Western Washington University

Summer 2015 - 2021

Summer 2015

Summer 2014

Postdoctoral Scholar, University of Calgary

Supervisor: Dr. Charles M. Henderson

December 2014 – May 2017

Contributor to the Sedimentary Geochemistry and Paleoenvironments Project

International effort to compile data from marine sediments, to better understand long-term changes in ocean chemistry.

Session Organizer

Geological Society of America 2018 Annual meeting in Indianapolis

Session T119: *Extinction and Survival across the Triassic-Jurassic Boundary*

Grant Reviewer

Natural Environment Research Council (UK), Pushing Frontiers Fund
American Chemical Society Petroleum Research Fund

Guest Editor

Interrelated Climatic, Oceanic, and Biotic Events During the Triassic-Jurassic Transition: a Global Perspective, a special issue of *Earth Science Reviews*

The Palaeozoic-Mesozoic Transition in South China: Oceanic Environments and Life from the Late Permian to the Late Triassic, a two-part special issue of *Palaeogeography, Palaeoclimatology, Palaeoecology*

Peer Reviewer

AAPG Bulletin
Earth and Planetary Science Letters
Geology
Global and Planetary Change
Journal of Asian Earth Sciences
Marine and Petroleum Geology
Palaeogeography, Palaeoclimatology, Palaeoecology
Palaeoworld

Teaching Assistant, University of Washington

<i>Dinosaurs</i>	2013-2014 Winter 2014
<i>Physical Processes of the Earth</i>	Fall 2013
<i>Field Geology</i>	Summer 2013, 2014
<i>Invertebrate Paleontology</i>	Spring 2013
<i>Introduction to Geological Sciences</i>	Winter 2013

Visiting Professor, Colorado College

<i>GY210: block II: The Rocky Mountains as a Physical System,</i> <i>GY210: block III: The Rocky Mountains as a Chemical System</i>	Fall 2012
--	------------------

NSF GK12 Ocean and Coastal Interdisciplinary Science teaching fellow, Ingraham High School, Seattle, WA

2011-2012

Tidal Estuaries Monitoring and Assessment Program

Summer 2008

Based at the National Ocean Service's Hollings Marine Lab, Charleston SC
Monitored anthropogenic nutrients and their impact on estuarine fauna throughout the southeast.

HONORS AND AWARDS:

Peter Misch Fellowship	2013
Inquisitive Graduate Student Support Grant	2013
Exxon Mobil Graduate Student Support Grant	2013
Robert and Nadine Bassett Fund Student Support Grant	2012
Best Oral Presentation in Geobiology - <i>UW ESS Research Gala</i>	2012
Best Oral Presentation by a Graduate Student - <i>UW ESS Research Gala</i>	2010
Phi Beta Kappa	2009
NOAA Ernest F. Hollings Scholarship	2007

ONGOING RESEARCH PROJECTS:

The Permian-Triassic extinction in Western Pangaea and the Panthalassic Ocean

- Conducting a series of linked outcrop and core studies of the Late Permian and Early Triassic ranging from southern Idaho to northeastern British Columbia.
- Focusing on proxies for nutrient cycling and productivity, to better understand changes in the intensity of coastal upwelling during latest-Permian global warming.

The Triassic-Jurassic extinction in the Panthalassic Basin

- Applying paleoproductivity tools to the Kennecott Point section (British Columbia), to better understand how nitrogen limitation affected phytoplankton in the open ocean during the prolonged Mesozoic greenhouse period.
- Samples collected from the accreted Mino-Tamba terrane of Japan will allow for future comparative studies across the Panthalassic basin.

High-Resolution Paleoenvironmental Studies in South China

- Contributing geochemical analyses to a comprehensive study of the Penglitan section (Guangxi), likely the highest resolution extant record of the latest Permian.
- Contributing to ongoing work on the Shangsi section (Sichuan), including a study of latest Permian redox conditions and the development of marine refugia in the Early Triassic.

Cretaceous Paleoenvironments of the James Ross Basin, Antarctica

- Using trace element geochemistry to reconstruct the depositional environment of the James Robb Basin during the latest Cretaceous, based on samples collected during two six-week cruises on the Antarctic research vessel *Laurence M. Gould* in 2010-2011.

Paleoceanography of the Ediacaran-Cambrian transition in South China

- Studying restriction, anoxia, and nutrient cycling on the Yangtze Block at the beginning of the Phanerozoic.
- Studying the relationship between oceanographic conditions and early animal evolution.

Reconstructing Productivity in Paleomarine Systems

- Compiling data from modern ocean sediment cores, to better quantify the relationship between the accumulation rate of proxies (such as organic carbon, phosphorus, and barium) and the primary productivity of phytoplankton in the overlying water column.

INSTRUMENTAL EXPERTISE:

Extensive experience measuring organic C and N isotopes using a continuous flow Elemental Analyzer-Isotope Ratio Mass Spectrometer (EA-IRMS).

Extensive experience measuring C and O isotopes in carbonates using a Kiel III autosampler and dual inlet Isotope Ratio Mass Spectrometer (IRMS).

Experience preparing samples for mineral and chemical composition measurements using X-ray fluorescence (XRF), X-ray diffraction (XRD), and Inductively Coupled Plasma Atomic Absorption Spectroscopy (ICP-AES).

Experienced with thin section petrography and use of JEOL 773 electron microprobe.

Certified in safe use of handheld XRF (HH-XRF) for rapid trace element measurements.

PUBLIC PRESENTATIONS:

FUNDED GRANT PROPOSALS:

The Permian-Triassic nitrogen cycle: from South China to North America Funded by the Chinese State Key Laboratory of Modern Paleontology and Stratigraphy May 2018

- Proposal for geochemical study of core and outcrop material from Permian-Triassic South China and British Columbia
- Valued at 80k yuan renminbi (\$13,000) of research support.

Biostratigraphy and Geochemical characterization of Early Triassic Montney deposition Funded by Progress Energy, December 2015

- Proposal for complete biostratigraphic and geochemical study of a 400 m core of the Early Triassic Montney Formation in northeastern British Columbia.
- Proposal based on preliminary geochemical results generated at the University of Calgary using handheld XRF.
- Valued at \$120k of salary and in kind support.

Application for GK12 Ocean and Coastal Interdisciplinary Science teaching fellowship Funded by NSF, Spring 2012

- Program provided graduate student support to active researchers who were helping to teach marine science in Seattle area public schools.
- Worked with science teachers at Ingraham High School to develop activity in support of the Biology, Earth Science, and Marine Biology curricula.

STUDENT MENTORING:

Sean Arias – Senior Capstone project and Independent Study

- Built on senior capstone project, adding study of nitrogen isotopes in the Jesmond atoll section. Presented a poster at the 2021 Geological Society of America annual meeting

Hannah Hogan – Undergraduate independent study and Senior thesis

- Conducted a study of volcanic influence on early-Changhsingian marine environments in South China
- Now working on a senior thesis examining Late Permian cherts from the Phosphoria Formation

Hannah Cothren – Senior thesis project

- A study of nitrogen cycling and primary productivity across the Permian-Triassic boundary, at the Penglaitan section in South China.

Matthew Comins – Senior thesis project

- A study of the nitrogen cycle during the Early Triassic recovery interval, based on the Chaohu section in South China

Kevin Cottingham – Senior thesis project

- Reconstructing carbonate environments in the Cache Creek terrane of British Columbia and testing redox proxy applicability in carbonate lithofacies.

Eldridge Machen – Senior thesis project

- A comprehensive study of the relationship between volcanism and paleoenvironmental conditions at the Penglaitan section in South China.

Samuel Moorer – Undergraduate independent study

- Conducting a geochemical study of the Guadalupian-Lopingian boundary in the Cache Creek terrane of British Columbia

Amanda Godbold – Master's thesis project

- Assembling a comprehensive paleoenvironmental study of an earliest Triassic 'refuge' from the Shangsi section in Sichuan, China. Amanda presented her results at the 2016 Geological Society of America annual meeting, and won an award for Best Student Presentation in Geobiology.

Chen Shen – Master's thesis project

- Using a high-resolution geochemical dataset from the Montney Formation to understand the effects of Milankovitch cycles on marine environments in the Early Triassic.

Ranjot Brar – Senior thesis project

- Collected biostratigraphic samples from the Phosphoria Formation of southern Idaho in the summer of 2015; we are now integrating conodont biostratigraphy with geochemistry in Late Permian rocks from Idaho, Alberta, and northeastern British Columbia.

Galen Griggs – UW undergraduate laboratory assistant

- Galen assisted with stable isotope measurements on samples from the Peck Creek section in northeastern British Columbia.
